

**ABSTRACT OF THE DISCLOSURE**

A liquid dispenser for a cap which is fitted to a mouth of a container holding a liquid therein includes a liquid-lifting device supported on an upper wall of the cap as pierced therethrough and including a helical screw and a cylindrical tube encompassing the helical screw, both having upper terminal parts thrust upward individually from the upper wall and lower terminal parts inserted into the container when the cap is fitted to the mouth of the container; and a housing adapted to accommodate therein a helical screw-driving device for rotating the helical screw in the liquid-lifting device and furnished with a delivery nozzle for allowing a liquid lifted by the liquid-lifting device to flow out of the liquid dispenser.
